

Chapter 36. Boost.DateTime

Table of Contents

[Calendar Dates](#)

[Location-independent Times](#)

[Location-dependent Times](#)

[Formatted Input and Output](#)

The library [Boost.DateTime](#) can be used to process time data such as calendar dates and times. In addition, Boost.DateTime provides extensions to account for time zones and supports formatted input and output of calendar dates and times. If you are looking for functions to get the current time or measure time, see Boost.Chrono in [Chapter 37](#).
